

Every account check
was silently queuing
behind the last one.

Nobody would've known.

A banking voice bot that answers in English, Hindi, Telugu, or a mix of both—however the caller actually talks.

XYZ BANK ASSISTANT · LIVE DEMO

THE BUG

**Every personal question hit
the same single database connection.**

A connection can only run
one query at a time.

Two people asking about their
balance in the same second?

One of them just waited.

No error. No crash. Just slower.

THE FIX

```
conn = db_conn.getconn()  
try:  
    cursor = conn.cursor()  
    cursor.execute(query)  
finally:  
    db_conn.putconn(conn)
```

Borrow it. Use it. Give it back.

Multiple lookups, actually running at the same time.

**Tested on 95 real cases
before trusting it with anything.**

Intent accuracy	91 / 95
Language detection	89 / 95
Account lookups	100%
Knowledge base	27 / 30

Real model calls. Real database. Nothing simulated.

**A bot that answers everything
in a bank is dangerous.
Knowing when to stop
is the actual feature.**
